

# INFO2300 – W24 – Rubric – Group Project 1 (GP01)

## INFO2300 – Group Project 1 (GP01): Rubric & Additional Information

### Required Elements

In this assignment, your team will build a prototype of your Capstone Project or of a project you have worked on before. You do not have to create a prototype of the entire project and can instead focus on a specific part of the project, such as a single feature. If you are in a group of people that have different capstone projects, you can choose any **one** to work with for this assignment.

**For this assignment, imagine that your instructor and your classmates are your “client”, and you are presenting your prototype to explain how the project (or part of the project) will work.**

### Additional Notes

There are many approaches to developing Prototypes. Researching and interpreting these approaches for your own project is part of the assignment.

In order to get the maximum mark(s), you need to offer detailed, coherent content following proper industry practices.

**Important note: If you are not basing your prototype on your Capstone Project, you are required to contact the instructor and get approval for the project you will be basing your work on.**

There are **two portions** to be delivered for this project:

- Part A (Group Portion)
- Part B (Individual Portion)

### Deliverables and Due Dates

#### Part A (Group Portion):

- All presentations will take place in-class on the week of **February 20th**.
- One member of the group will submit any files used in the presentation (for example, a PowerPoint file) to the Assignment Dropbox on eConestoga.
- The same member will also submit one document (Word, PDF, etc.) describing at least **2 (two)** points brought up during the Q&A session, and the team’s response to those comments.

#### Part B (Individual Portion):

- Each member of the group needs to submit one document (Word, PDF, etc.) to the Assignment Dropbox including their **individual** “Presentation Critique” and “Prototypes Reflection”.
- The individual portion is due on **February 23rd, at 11:59 PM, EST**.

# INFO2300 – W24 – Rubric – Group Project 1 (GP01)

## **Part A: Presentation with Q&A**

**Grade:** The Group Portion is worth 80% of the mark.

**Submission:** Only one member of the group needs to submit this part to the Assignment Dropbox.

**Instructions:**

### Presentation of the Prototype

- The presentation should take between 8 (minimum) and 10 (maximum) minutes.
  - The choice of media for this presentation is up to your group: It can be a PowerPoint presentation, a Video, a Live Demonstration, a Model, or other format.
- The presentation needs to describe:
  - How the application works
  - How it will be used from the point-of-view of the user (usually, your client).

### Q&A Session

- Q&A should take a maximum of 5 minutes.
- The group should take note of any questions or feedback received.
- As a group, you are required to respond to at least 2 (two) points that were brought up as part of your submission.

## **Part B: Peer Presentation Critique & Prototypes Reflection**

**Grade:** The Individual Portion is worth 20% of the mark.

**Submission:** Each member of the group needs to submit their own individual portion to the Assignment Dropbox.

**Instructions:** Part B includes two portions, the Presentation Critique, and the Prototypes Reflection:

### Presentation Critique

- Answer and discuss the following points for your favorite presentation (other than your own):
  - a. What was their main “message”?
  - b. (At least) Two (2) things that you especially liked about their presentation.
  - c. (At least) Two (2) suggestions that would have made their presentation better.

### Prototypes Reflection

- Answer and discuss the following points regarding the prototype discussed in your group project:
  - a. Describe the level of fidelity of your prototype. Explain why you chose this level of fidelity and what are the anticipated benefits/drawbacks of your decision.
  - b. Describe what was your contribution to the prototype development and/or presentation.
  - c. Explain how your prototype would be useful in an actual presentation to a client.
  - d. If you were to do this project again (create a prototype), but had to do it differently, how would you do it, and why?
